

# Wireless IP Handset

## Wireless where you want it

Samsung Wireless IP Phone will provide you with significant cost efficiency with its ability to remove unnecessary cabling and maintenance through the qualified voice data service of IP & WLAN.

It will also liberate you from the confines of your office. Now you can stay in touch wherever you are, no longer tied to your desk, waiting for that important call.

## Stylish Design

These stylish business handsets deliver the full range of OfficeServ features using the same user interface available with Samsung SMT-i3100 and i5200 series IP handsets. The Samsung Wireless IP solution is an integral part of the OfficeServ architecture, within which, there is a solution size to most efficiently meet your business needs.

## Function

The SMT-W5120 has many convenient and easy to use features including Call Back, Station Message and Camp On. There are also many features you can use during a call such as Mute this allows you to block your voice but still have the ability to hear the other party. Conference call, Call transfer and call hold.

## Phone applications

The SMT-W5120 is packed full of applications which give you the same capabilities of a desk handset; from Phonebooks and a Voice Mail indication to Call Forward, Password Protection and Power Save Mode. There are also a number of utilities available such as an Alarm, Scheduler, Calculator, World clock and a Unit convertor. For that personal touch the SMT-W5120 allows you to customise your ring tone, key tone, ring type, volume and for your convenience you can display all screen prompts in several languages.
